

CUSTOM INTERNAL SYSTEMS FOR YOUR TEAM

AI Operations Platforms.

One connected operating system for tasks, records, approvals, knowledge and reporting - built around how your team actually works, with the repetitive parts running on their own.

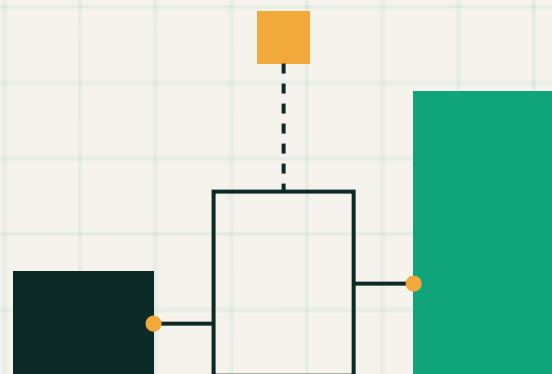

FIG. 01 - ONE CONNECTED SYSTEM

68%

MANUAL WORK CUT

Hrs → Min

REPORTING TIME

91%

COPILOT ACCURACY

30-45

DAYS TO DEPLOY

Your operations run on a **patchwork**. We fix that.

Operations in most growing companies run on spreadsheets, group chats, and disconnected software. Each tool works fine by itself - but the gaps between them create the real cost.

THE CHALLENGE

The gaps between tools are the real cost

- Someone re-typing the same client details into three systems
- A manager losing an afternoon every week building a status report by hand
- A new hire needing a month just to learn where everything lives
- Knowledge trapped in people's heads instead of a searchable system
- Leadership asking for reports instead of simply checking a dashboard

OUR SOLUTION

One connected operating system

We build AI Operations Platforms designed around how your team already works - not the other way around. Custom internal tools, AI copilots trained on your own company knowledge, automated reporting and workflow systems in a single platform.

THE OUTCOME

The day-to-day running of the business stops depending on someone's memory or someone's Friday afternoon.

WHAT TEAMS GAIN

50-70%

less manual coordination work - without adding headcount

Hrs → Min

reporting time drops from hours of assembly to a live view

Days

to onboard new staff, rather than weeks of asking around

The cost of running operations manually.

As teams grow past a handful of people, the tools that once worked fine start working against you. Three things tend to happen at the same time:

SYMPTOM 01

Coordination work multiplies

More handoffs, more status updates, more places information has to be copied by hand - every new person adds friction.

SYMPTOM 02

Knowledge stays in heads

Critical know-how lives in people's memories instead of in a system anyone can search - and it walks out the door with them.

SYMPTOM 03

Leadership loses visibility

Leaders end up asking for reports instead of simply checking a dashboard - and decisions wait on someone's spare afternoon.

WHY ANOTHER TOOL NEVER FIXES IT

Most companies respond by adding another project board, another chat app, another spreadsheet. That rarely solves the problem - because the issue was never a missing tool. It was the absence of one system that ties the existing ones together and removes the manual steps in between.

WHAT WE'RE SEEING

8-12 hrs

per week spent by ops teams on tasks with no real decision-making

20-30%

of productive time lost to context-switching across 4+ disconnected tools

Majority

of routine questions answered by copilots trained on company docs - no human needed

2-3 mo

typical payback period after consolidating onto one internal platform

Complete operating infrastructure, built around your process.

Every component connects directly to less coordination work and faster decisions - not just a nicer-looking dashboard.

SERVICE 01

Internal Dashboards & Reporting

A single screen showing what's actually happening across the business - pipeline, delivery, workload - pulled live from the systems you already run.

- Live dashboards for leadership, operations and team leads
- Automated weekly and monthly reports, delivered without anyone asking
- Custom metrics built around how your business measures success

SERVICE 02

Internal Tools & Task Systems

Purpose-built tools for workflows that don't fit off-the-shelf software - matched to how your team works, not the other way around.

- Custom task and project tracking built around your process
- Approval workflows with automatic routing to the right person
- Internal request portals for IT, HR, finance or client operations

SERVICE 03

Knowledge Systems & AI Copilots

A searchable home for company knowledge - SOPs, policies, past decisions, client history - paired with an assistant that answers from it directly.

- Centralized knowledge base built from your existing documents
- An internal AI copilot trained on your company's own information
- Searchable history of decisions, client notes and process docs

SERVICE 04

CRM & Coordination Systems

A record of every client and deal the whole team actually uses - with handoffs happening automatically, not by remembering to forward an email.

- Custom CRM tailored to your sales and delivery process
- Automatic handoffs between sales, onboarding and account teams
- Client history, communication and status in one shared place

POWERED BY Next.js · Supabase · GPT-4 · Claude API · Vector Search · Cloudflare Workers · Zapier · Slack · WhatsApp · Google Workspace · HubSpot

The Collide Advantage.

Plenty of agencies can write software. What’s harder to find is a team that sits with your actual operations, figures out what’s genuinely slowing you down, and builds something your people will still be using six months later.

Capability	Collide Solutions	Typical Dev Agency	In-house Build
Built around your process	✓ From day one	Often templated	Depends on bandwidth
Time to first working system	30-45 days	60-90+ days	Months, if at all
AI copilot included	✓ Trained on your data	Add-on, extra cost	Rarely built well
Ongoing access to builders	✓ Direct, no account layer	Routed through PM	Limited capacity
Cost vs. enterprise vendors	✓ 40-50% less	Comparable or higher	Often underestimated

THE COLLIDE ADVANTAGE

- Execution-first mindset: working systems, not strategy decks
- Transparent pricing with month-to-month flexibility
- 30-45 day deployment vs. the 60-plus day industry standard
- Direct access to the people building your platform
- Success measured by what stopped being manual, not a feature list

TECHNOLOGY STACK

APP & DATA Next.js, Supabase, custom dashboards around your metrics	AI & KNOWLEDGE GPT-4, Claude API, vector search by meaning - not keywords
AUTOMATION Cloudflare Workers, Zapier / Make, Slack, WhatsApp, HubSpot	SECURITY Role-based access, encrypted storage, audit logs, uptime alerts

Transparent tiers.

Month-to-month flexibility.

Clear deliverables at each level. All engagements include direct access to our team - no account layers, no lock-in.

TIER 1	TIER 2 MOST POPULAR	TIER 3
Starter ₹49,000	Growth ₹99,000	Enterprise Let's Talk
Perfect for a single team or department ready to replace its first set of manual workflows. 1-2 custom internal tools 1 leadership dashboard - Basic knowledge base setup - Up to 2 existing system integrations - Monthly performance check-in	For companies ready to run operations across multiple teams from one platform. 3-5 connected internal tools - Department-level + leadership dashboards - AI copilot trained on your own company data - Up to 5 existing system integrations - Ongoing support with priority turnaround	For organizations with multiple departments, custom security needs, or compliance requirements. - Scope and pricing defined after a working session with your operations and IT teams - Custom security & compliance requirements - Multi-department rollout

GETTING STARTED

Start with one tool. Expand when it's proven useful.

Every engagement starts with a short scoping call where we look at how your team actually works today and identify which part is worth building first. There's no requirement to commit to a full platform on day one.

30-45 days

to your first working system

2-3 months

typical payback after consolidation

Month-to-month

flexibility, with no lock-in

GETTING STARTED

Stop managing tools. Start managing the business.

Every engagement starts with a short scoping call where we look at how your team actually works today and identify which part is worth building first.
